We are always looking for new Business Analyst talent. If you are looking to work with a high calibre team, we want to hear from you.

The Project Foundry has substantially grown its portfolio of blue-chip clients across the finance & technology, telecoms and aviation sectors. We bring a fresh and creative approach to Project Management; this approach resonates with existing and potential clients. As a result of our expanding client base, we are looking for experienced Business Analysts with expertise across a broad range of technologies and business process mapping skills.

If you are interested in building something special and want the opportunity to work with a like-minded team, we here at **The Project Foundry** want to work with you.

Our ideal colleague will be self-directed, highly motivated, and comfortable working in an extremely fast-paced environment. Flexibility and adaptability are key attributes needed for success. Candidates should also have strong business analysis and coordination skills to handle a variety of activities and complexities.

Plan

- Proactively communicate and collaborate with all stakeholders to elicit and analyse requirements, deconstruct high-level information, understand low-level information and deliver the appropriate artefacts.

- Develop business analysis communication and requirements management plans, participate in and potentially lead planning meetings and work with project managers to define the business analysis tasks for a project.

- Assess capability gaps, identify relationships and dependencies between new and existing systems and evaluate proposed solutions.

- Collaborating with business partners and project team members to efficiently write requirements and implement projects.

Execute

- Act as a liaison and negotiator between the business community and the IT organisation and manage client expectations effectively.

- Work with developers, analysts and consultants during the development and implementation phases to ensure that acceptability criteria are being met and to manage scope creep and change requests.

- Review and evaluate delivered solutions to assess whether expected benefits are being achieved.

Deliver

- Ability to facilitate alignment of technology and business strategy, to create a phenomenal customer experience by proactive partnering at all business levels.

Sound good? What do you need?

- Strong analytical skills required understanding of how to interpret customer business needs and translate them into application and operational requirements.

- Very good organisational skills, logical and efficient thinking and strong attention to detail.

- Excellent verbal and written communication skills, and the ability to interact professionally with a diverse group of stakeholders, including senior executives, managers and subject matter experts.

- Adept at using negotiation, facilitation and presentation techniques to build consensus, and skilled at communicating difficult and sensitive information tactfully.

- Good practical knowledge of data manipulation for use in report software, spreadsheets, graphs and flow charts.

- Good knowledge of the Microsoft Office Suite, including Visio.

- Well-developed process flow designing skills.

- Knowledge of project management methodologies and tools, particularly Agile Scrum.

- A degree-level qualification in a relevant discipline.
