

**We are looking for an Infrastructure Cloud Engineer to join our client team. You will work alongside our CTO and be responsible for providing inhouse support and solutions to our clients. If you are looking for an exciting new opportunity and career growth, we want to hear from you.**

The Project Foundry has substantially grown its portfolio of blue-chip clients across the finance and technology, telecoms, and aviation sectors. We bring a fresh and creative approach to our clients across all areas of project and delivery management; this approach resonates with existing and potential clients. As a result of our expanding client base, we are looking for an **Infrastructure Cloud Engineer** to join our team.

Our ideal colleague will be self-directed, highly motivated, and comfortable working in an extremely fast-paced environment. You will have experience working in cloud environments with a strong IT knowledge to provide support and solutions to clients in various industries. Comfortable challenging the status quo and ability to form a big picture view of dependencies for solution design and issue resolution are key in this role.

Our culture is founded on 5 Key Pillars- Excellence in Delivery, Accountability and Ownership, Communication and Collaboration, Innovation and Community, and Connecting our Business and we deliver this through a one-team approach. We continuously promote diversity, collaboration, and innovation. If you are interested in building something special and want the opportunity to work with a like-minded team, we here at **The Project Foundry** want to work with you.

### **Plan**

- Liaise with the commercial team and support responses to tender applications and pre-sales on an ad hoc basis
- Assist customers with cloud optimisation and cost control for existing and new projects
- 
- Demonstrate knowledge of how architecture is to be determined
- Keep up to date with emerging and cloud computing technologies
- Be able to diagnose problems quickly and have foresight into potential issues

### **Execute**

- Hold workshops with customers/potential customer on various topics ranging from cloud migrations, hybrid working, system implementations, upgrades and improvements of system along with brain storming
- Compile a high/low level design document based on the outcome of the customer meetings
- Meeting with clients to architect a cloud-based solution based on their needs.
- Work with vendors and stakeholders and push back on issues

### **Deliver**

- Provide in-house support and solutions to clients
- Provide escalation point to the clients with more difficult issues
- Attend weekly calls with clients on updates and provide weekly escalations
- Deliver enterprise advisory services on issues and resolutions

### Sound good? What do you need?

- Substantial experience in Enterprise IT support and systems
- Demonstrable experience in Azure and AWS Architecture (IaaS, PaaS, SaaS)
- Demonstrable Experience in Azure Active Directory
- Extensive knowledge of the Microsoft 365 platform including Office365
- Cloud Certified (desirable)
- Must have strong interpersonal, collaboration and communication skills and be able to build relationships at all levels of the organisation
- Experience in GCP, Oracle Cloud, IBM Cloud (desirable)
- Strong knowledge on cloud-based deployments managing from end to end
- Experience working with Power Platform and automation
- Scripting (PowerShell, Azure CLI)
- Templates (ARM Templates, Terraform)
- Tagging
- Disaster Recovery / High Availability Technologies
- Networking knowledge (BGP, DNS, Routing, Vlan, Aggregation)
- Containerisation technology
- DevOps platforms
- Windows Server
- Virtualization Platforms
- VMware Platform
- Hyper-V Platform
- Strong Documentation & Communications Skills
